

INTO CI/CD

- A** Achieve,
- B** Build,
- C** Cloud-Based Software Automation and,
- D** Deployment.

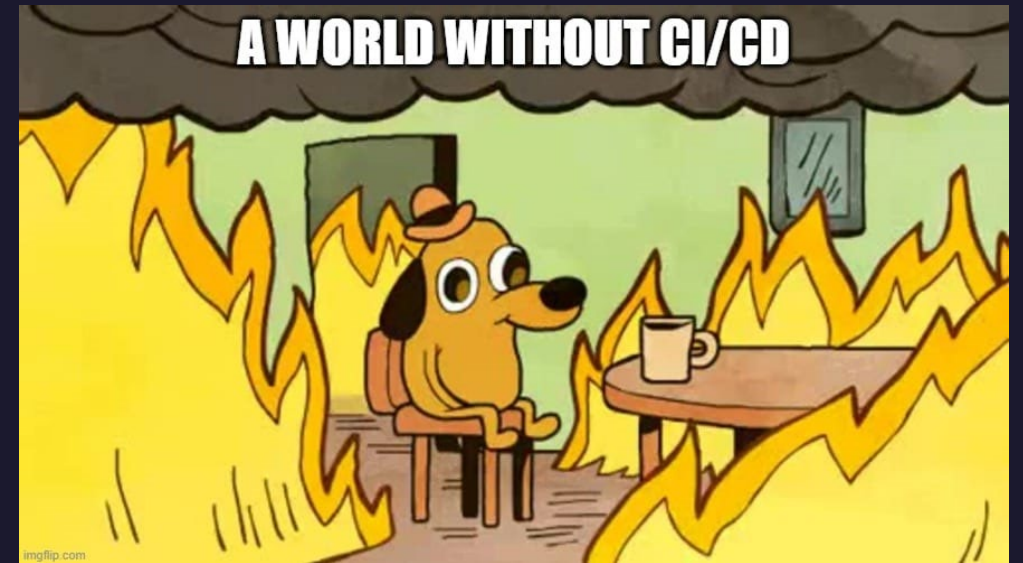

CI/CD

- CI: CI stands for continuous integration. It ensures that the team of developers securely merge their code efficiently into a mainline to ensure high quality and awesome business standards.
- CD: CD stands for continuous delivery. It helps us automate deployments of code for efficient Time-to-Market and to beat the competition
- CD: CD also stands for Continuous Delivery. This ensures our product get delivered to production continuously keeping our customers happy and the money flowing in.

WHY WE NEED CICD

- Quickly catch errors and reduce deploy to production time
- Reduces downtimes costs and the costs that comes with human errors and improves deployment time
- Automation of tests such as smoke test helps reduces downtime and financial losses

WHY WE NEED CICD

- Manager will receive products and deliverables faster than the competition
- Cloud infrastructure and services costs will be better supervised and managed more efficiently

Thank You
